

The logo consists of a stylized white 'S' shape on the left, formed by two overlapping curved lines. To its right is a vertical line, followed by the text 'Information Risk Group' in a white serif font.

# Information Risk Group

*Security Risk Management*

Information Risk Group (IRG) was established in 1997 as an information technology and security consulting company. In that same year IRG became the exclusive service provider for security reviews associated with the Lloyds of London's e-Comprehensive IT security insurance policy.

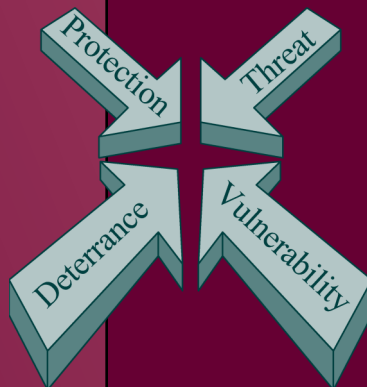

IRG's proprietary security architecture has also been used to assess and re-engineer the IT security controls for many Fortune 100 Companies. IRG helps customer companies develop, implement or improve security controls to mitigate the risk associated with today's threat

Natural Disasters can come in all shapes, forms, and sizes. Today's hurricane may be tomorrow's earthquake. Businesses must have a comprehensive response plan. IRG can provide all levels of assistance in developing, refining, or deploying a comprehensive business continuity plan.

Information must be protected in all its lifecycle phases. This includes creation, use, processing, storage, transport and retirement. Failure to design and deploy controls to protect information during each stage could result in a loss of legal standing. Information owners must differentiate their handling of proprietary information in order to demonstrate a separate standard of care. IRG has the experience to design policies, procedures and controls to deal with the confidentiality, integrity, and availability of information in all stages.

There's a lot of talk today about how to organize the enterprise security function. You frequently hear words like integration and convergence. While an approach that follows the integration and convergence model may yield desired results, those results will only happen because you adopted comprehensive, efficient and effective security controls. A better approach would be driven by organizational threat and vulnerability analysis and countervails that managed your security risk profile to an acceptable level, in the most cost effective manner possible.

## IRG Services

Policy and Procedure Development

Business Continuity Planning

Incident Response

Information Lifecycle Management

Threat and Vulnerability Reviews

Security Operations Development

Security Assessment/ Reengineering

Technology Related Investigations

Security Insurance Consultation

Physical Security Reviews & Programs

Awareness & Training Programs

Employees cannot properly respond to security situations unless they know what to do. IRG can develop or assist in the development of policies and procedures to inform employees. Such policies can easily become the underpinning for a threat/vulnerability awareness program that can be used to satisfy many compliance requirements.

Operating on the World Wide Web can be a great boost to business or it can open the business to great risk. IRG can assist in establishing controls to minimize risk associated with internet use.

Security related incidents are unpredictable. One may be initiated by a fire, gas leak, water leak, disgruntled employee, terrorist, and so on. Incident response planning is critical - small errors in early stages can lead to big problems as the incident evolves. IRG has years of experience in designing and deploying Incident Response Programs.

Today we most often operate in a risk-laden technological environment that, without proper controls, exposes our computers and networks, as well as the information they process, to a host of threats. IRG conducts Risk reviews, including specialized threat and vulnerability reviews, that can be used to create a roadmap for a company to achieve an acceptable security state.
